

# Staff Augmentation for E-Commerce Solution Dev.

## PROJECT DETAILS

 Staff Augmentation

 Jan. 2019 - May 2020

 \$200,000 to \$999,999

“

*"I appreciated their desire to deliver quality work and ask for feedback on a continuous basis."*

## PROJECT SUMMARY

Hatimeria worked with an e-commerce development company, augmenting the team for a large-scale headless e-commerce integration project. They provided a solutions architect, React developers, and QA resources.

## PROJECT FEEDBACK

The team's ability to successfully embed themselves within the partner's staff through daily scrum meetings and sprints allowed the company to complete the final product on time and within the expected budget. Their deep knowledge of complex technologies impressed and proved helpful.

## The Client

Introduce your business and what you do there.

I'm the VP of the project management office for an organization that provides large e-commerce solutions.

## The Challenge

What challenge were you trying to address with Hatimeria?

We hired them to work on several projects over the past few years through staff augmentation. A few members of their development team have integrated with ours to assist with various technologies and platforms.

 VP Project Management Office, Solutions Development Company

 IT Services

 51-200 Employees

 Marina del Rey, California

### CLIENT RATING

Quality: 5.0

Schedule: 4.5

Cost: 5.0

Would Refer: 5.0

## The Approach

### What was the scope of their involvement?

For a third-party client, they worked with us on a large e-commerce build that leveraged headless implementation. We decoupled the frontend presentation layout from the e-commerce experience, so we used several of their team members for the project.

They essentially became a part of our team in the process. We co-developed the million-dollar implementation that supported 20 different currencies and locations for sites around the world. Their developers had experience with React.js, which we were using to create the frontend experience.

### What is the team composition?

We worked with a solutions architect as well as several frontend developers and QA testers. Their solutions architect collaborated with our solutions architect to design the solution together.

### How did you come to work with Hatimeria?

One of our technical leads worked with them prior to joining our organization. When we needed extra developers, he recommended their team to us. Our first project with them was a smaller project. As more projects came in, we began leveraging their various resources.

### How much have you invested with them?

Over the course of that project, we invested about \$500,000.

### What is the status of this engagement?

We worked together on this project from about January 2019–May 2020.

## The Outcome

### What evidence can you share that demonstrates the impact of the engagement?

The ultimate success of the project was we were able to deliver the product on time and on budget. That success was due largely to the help we received from their team. They had great communication skills, were solutions-oriented, and ran thorough QA to ensure our client's satisfaction.

### How did Hatimeria perform from a project management standpoint?

Our project manager ran the project, so their team wasn't responsible for that level of organization. However, they were excellent communicators, attending daily scrum meetings, contributing to all of our sprints, and were completely embedded in the project.

### What did you find most impressive about them?

Their experience with technology was very advanced, very knowledgeable and ahead-of-the-curve when it came to headless implementation. We were impressed with their skillsets, engineers, and solutions architects.

### Are there any areas they could improve?

They were very proactive and always striving to improve their services, so we didn't feel that they ever feel short on delivery or communication. I appreciated their desire to deliver quality work and ask for feedback on a continuous basis.

Hatimeria

# Hatimeria

## Do you have any advice for potential customers?

Align your project with their skillsets. They had a lot of experience with some of the newer frontend technologies. Additionally, it's helpful to set expectations for planning resources at the start of the project. Make sure your requests for their hours and services are clear.
